Errata

The series of NASA Reference Publications numbered RP 1297 through 1300 has been printed without the final page of tabular information in each volume. The series consists of the following titles:

Document	Title	Volume	Pg. missing
RP 1297	*Bonner Durchmusterung*	Volume I	p. 457
		Volume II	p. 447
RP 1298	*Bonner Durchmusterung (Southern Durchmusterung)*	Volume III	p. 375
RP 1299	*Cordoba Durchmusterung*	Volume I	p. 446
		Volume II	p. 415
		Volume III	p. 424
		Volume IV	p. 423
RP 1300	*Cape Photographic Durchmusterung*	Volume I	p. 424
		Volume II	p. 440
		Volume III	p. 401

Please insert these pages in all copies of the series. We regret any inconvenience this has caused.

Cape Photographic Durchmusterung Volume II

1 Introduction

The *Cape Photographic Durchmusterung* (CPD, Gill and Kapteyn 1895-1900) is a photographic survey of southern stars in the declination range -18 deg to -90 degrees. The original goal of the work was to carry out a southern survey similar to those of the *Bonner Durchmusterung* (BD, Argelander 1859-1862, see also Küstner 1903 and Schönfeld (1886)) and the *Cordoba Durchmusterung* (CD, Thome 1892-1932) but using photographic plates which would provide a permanent record of the sky at the epoch of observation. The summary of the positional uncertainties quoted in the third volume of the published catalog gives ± 0.28 sec (R.A.), ± 0.044 arcmin (Dec.). The probable error of a photographic magnitude, as determined by combining results for different magnitudes and weighting proportionately according to the numbers of stars in each class of magnitude, is given as ± 0.055 mag. From an analysis of the faint magnitude limits on the plates discussed in the third volume introduction, the catalog as a whole can be considered complete to photographic magnitude 9.2, but it is stated that it will be found practically complete, in or near the Milky Way, to magnitude 9.5. The total number of stars in the zones -19 to -89 degrees and the total sky area covered result in a mean density of 32.66 stars per square degree, as compared with 15.19 for Argelander's BD, 18.21 for Schönfeld's SD, and 56.00 for the CD zones -22 through -41 degrees.

2 Source Reference

Gill, D. and Kapteyn, J. C. 1895-1900, Cape Photographic Durchmusterung, Ann. Cape Obs. 3 (1895, Part I: zones -18 to -37 degrees); 4 (1897, Part II: zones -38 to -52 degrees); 5 (1900, Part III: zones -53 to -89 degrees).

3 Preparation of the Machine-readable Catalog

The data in the machine-readable *Cape Photographic Durchmusterung* were keypunched directly from the published catalogs. The northern zones (-18 to -32 degrees and -35 degrees) were punched at Case Western Reserve University under the direction of B. N. Rappaport, who initiated the work and used the data as part of a project on the production of star charts by computer. However, only zones -18 through -26 degrees and -28 degrees had been verified and checked thoroughly, and some zones had not been completed. Mr. Rappaport was contacted and volunteered to continue the project and to oversee the punching and verifying of the remaining zones and those not verified and checked at Case. These zones were processed by a commercial firm with funding provided by the National Space Science Data Center, but all systematic checking of the completed zones was carried out by Mr. Rappaport on a volunteer basis. The zones were rechecked for counts and errata corrections and the data reformatted by Dr. Wayne

PRECEDING PAGE BLANK NOT FILMED

INTENTIONALLY BLANK

H. Warren Jr. The individual zones were then concatenated from disk data sets to magnetic tape file in CPD number order from north to south.

4 The Catalog

As in the printed catalog, the positions are for the 1875 equinox and are given to 0.1^s in right ascension and $0.1'$ in declination for the equinox 1875. Each page is headed by two entries giving the DM number and right ascension for the first and last entries on the page, respectively. Data are present for all stars in the catalog except two which have been deleted in the corrigenda; these have been flagged by a "D" following the number of each respective record, but the records and data have been left in the machine version in order not to change the star counts and numerical sequencing.

All corrections made to the original catalog by incorporation of the errata are presented in Section 5, where it is noted when stars have become disordered in right ascension following the changes. No other corrections or changes have been incorporated into the original data, e.g., from more modern positions and magnitudes or comparison with other catalogs. Users should note that, due to corrections inserted from the errata, the CPD stars are not strictly in right ascension order within each zone.

5 Changes Made to the Catalog

CD Number	Field	From	To	
-38 6265b				Insert: 9.6 15 36 47.6, -38 1.0.
-39 4387	MAG	10.7	10.4	
-41 3407	RAm	5	6	and 13 stars following
-50 6654	MAG	9.6	6.7	
-50 11545	DEC	34.5	44.5	
-52 3270	DEC	.09	0.9	

6 Acknowledgments

This project owes its completion to the extensive work and striving for perfection of Barry Rappaport, who supervised the punching of all data, ran numerous machine and manual checks on completed zones, and prepared the preliminary tape of the finished catalog. The quality work of the keypunchers at Case Western Reserve University and Syntronix, Sherman Oaks, California is also greatly appreciated. The encouragement and support of the NSSDC Director, James I. Vette, made the completion of this project possible. Wayne H. Warren Jr. organized the preparation of the machine-readable version of the catalog from which this edition was

derived, checked and reformatted the data, and wrote the document on which this introduction is based. Nancy G. Roman prepared the hard-copy version of the catalog.
